

DATALOCKER ALPHATALK PUSH-TO-TALK

TAA Compliant Headset With 3.5mm Audio Connector

ALPHATALK PUSH-TO-TALK HEADSET IS SIMPLE AND SECURE

AlphaTalk headsets are developed with light materials for optimal comfort even through many hours of wear. The AlphaTalk headset comes with a 270-degree rotatable microphone and noise cancellation features. Foam earpads are covered in synthetic leather for added comfort and easy maintenance. Includes a hanging headset holder (with 3m tape for adhesion to a desk) and a removable lapel clip to keep the inline volume controls within reach.

Push-To-Talk Feature

AlphaTalk Push-To-Talk, also known as press-to-transmit feature enables the user to start communication at the push of the button so your callers will only hear what you want them to hear and nothing else

Better Conversation

The most important function of a headset is to eliminate background noise and let callers hear your voice clearly. AlphaTalk's microphone delivers crystal-clear conversations for closer connections with your caller.

TAA Compliant

Using a headset that is not TAA compliant can dramatically increase your vulnerability to security breaches. DataLocker's AlphaTalk is a TAA compliant headset that protects your speaker or microphone from open door breaches or leak of sensitive data. Let DataLocker help you protect your agency from unwanted intrusion.

Broad Compatibility

Compatible with any device with a 3.5mm audio jack.
